Major Issues

| Issue | Status |
|--|--|
| EAI is working with ACS to develop a strategy and schedule for upgrading OpenVMS and MQSeries. | <p>4/26 The Open VMS, MQSeries, and Data Integrator upgrades were completed in the DLSS test environment on 4/25. Testing will follow during the week of 4/29.</p> <p>4/19 The current strategy is to wait to implement the Open VMS upgrade. Current software versions of the EAI architecture will be deployed to Production. Once the new version of the Data Integrator product is released, then upgrades for Data Integrator, Open VMS, and MQSeries will be tested and implemented at once.</p> |
| Changes in VDC change control process require coordination with CSC. | <p>Potentially significant.</p> <p>Delays deployment of interfaces for eCB, FARS, COD. . Working with ITA and CSC to refine change control process and schedule maintenance windows.</p> |

EAI Security Context

EAI Operates within the context of the FSA Infrastructure supporting FSA Applications

| Layer | Example | Developer Access | Application User Access | Physical Access |
|---|---|--|---|---|
| Application Software supporting a business function | COD, CPS, DLSS, DLCS, DMCS, NSLDS, PEPS | Limited Group of Developers through FSA Security Officer | UserID Controlled by FSA Security Officer | Controlled Access to Developer Facilities |
| EAI Architecture Common Capabilities used by Applications | IBM MQSeries, MQ System Integrator, Data Integrator | Limited Group of Developers through FSA EAI Security Officer | Queue Manager to Queue Manager through Applications | Via Physical Network Controlled by VDC |
| Infrastructure Platforms for Architecture and Applications | Servers, O/S, Network, Routers, Firewall | Physical Access Required | Limited Production Access via Applications | Port Restrictions, Firewalls, Router Encryption |

EAI Security needs to address the two areas of 1) Developer Access, and 2) Access of Queue Managers to Other Queue Managers

Queue Manager Access Control

Message Channel Agents Ensure Queue Managers are on Expected Servers

- MQSeries Message Channel Agent (MCA) enables the authentication process to be carried out
- MCA will accept data from authorized servers only (based on ACL-Access Control list)

MQSeries Developer Access Control

Developer Access is Controlled through Normal Access Procedures

Complete access control facilities for MQSeries using external security manager:

- FSA Access control is configured at the “group” level on Unix platforms
- FSA Access control is configured at the MQ object level on OS/390

Implementation Status

- Queue Manager Access Control
 - Implementation in Progress
 - Deployment for COD Release 1.1
- User Access Control
 - Currently using Existing Procedures

EAI - FMS Performance Test Results

| Interface | Objective | Test | Results |
|-----------|--|---|--|
| FMS - COD | Measure the rate at which the EAI Bus handles FMS - COD Transactions | 370 transactions were monitored from their availability on the Bus until they were committed to the FMS database. | Transactions were available to FMS in 166 seconds. (2 messages per second) |
| | | 278 transactions were monitored from the time they are available in the FMS database until they land on a queue destined for COD | Transactions were available to be sent to COD in 84 seconds. (3 messages per second) |
| eCB - FMS | Measure the rate at which the interface processes eCB UTCL file | A UTCL file with 1945 detailed records was monitored from its availability on the Bus until it was committed to the FMS database. | File was available to FMS in 22 minutes. (1.5 records per second) |
| | | A UTCL file with 325 detailed records was monitored from its availability on the Bus until it was committed to the FMS database. | File was available to FMS in 3 minutes (1.8 records per second) |

EAI Performance Test Results

| Interface | Objective | Test | Results |
|------------------------|--|---|--|
| PEPS - EAI | Measure time to transfer School File (127 MB) from PEPS to EAI Bus | Transfer file using FTP | Transfer took 2 hrs, 21 min, 28 sec |
| | | Transfer file using EAI | Transfer took 6 min, 10 sec |
| DLSS - CMDM | Measure the transfer rate of very large monthly demographic file from DLSS to CMDM | Transfer the file using FTP | Transfer took 13 hours |
| | | Transfer the file using EAI | Transfer took 2.5 hours |
| P-Note Data from LOWEB | Measure the response time for a request for P-Note Data | Several thousand requests for P-Note data were made from the WebSphere server, through the EAI Bus Server, to the LOWEB Server. | Average response time was 1.2 sec |
| SAIG - COD | Assess SAIG ability to process 6,000 sends within one hour | Simulated 6,000 sends in a very short period of time | All transactions were processed within 30 minutes. |

COD - XML File Conversion Performance

Test files of 20MB, 160MB and 500MB were processed to obtain an understanding of the performance characteristics of the processor as it operated on the BUS (Sun E3500, 4 400 MHz processors, 4 GB RAM). Testing showed that there was no performance degradation of the processor as the file size grew.

The processor was able to convert a 20 MB file (4300-6500 transactions) in 60-90 seconds, (depending on file type). Results of the tests have been compared to average and max daily volume statistics to obtain an estimate of total processing time.

| File Type | Average # of daily transactions | Average day processing time | Maximum # of daily transactions | Maximum day processing time |
|--------------------------------|---------------------------------|-----------------------------|---------------------------------|-----------------------------|
| Output Common Record | 200MB | 10 min. | 600MB | 60 min |
| Legacy Pell Origination Ack. | 30,000 | 7.5 min. | 125,000 | 31.5 min. |
| Legacy Pell Disbursement. Ack. | 45,000 | 10 min | 175,000 | 38 min. |
| Legacy DL Origination Ack. | 10,000 | 3 min. | 50,000 | 15 min. |

| System Generated Responses | 40,000 | 8 min. | 175,000 | 32 min. |

COD - File Transfer Performance

The tests were conducted from the host system of the trading partner, over MQ/DI, through the BUS. An average and a maximum file size is used, to obtain data on operation under average and heavy loads.
